Equine Manipulation, Myofascial & Soft-Tissue technique

Practical, hands-on training in the treatment of equine spinal & connective tissue problems.

AEB seminars teach a balance of skills: chiropractic spinal manipulation, myofascial and soft-tissue techniques, as practiced by equine veterinarians, chiropractors and physiotherapists throughout Europe & the USA.

Each module consists of a series of mini-seminars followed by practical work on college and genuine “patient” horses. This is very much a “hands on” course to give real manual skills and understanding that can be used from day one. The course is squarely based on and referenced to equestrian and human sciences.

for: Veterinarians, Chiropractors, Physiotherapists, Osteopaths & established equine professionals

Module Dates

| Mod  | Introduction & Pelvic | Oct 19/20 2013 |
| Mod 2 | Thoraco-lumbar | Nov 16/17 2013 |
| Mod 3 | Cervical | Dec 14/15 2013 |
| Mod 4 | Extremities | Feb 15/16 2014 |
| Mod 5 | Integrated & Review | Mar 15/16 2014 |

9.00 - 5.30 Saturday, 9.00 - 1.00 Sunday
Fees: £295 per module

Applied Equine Biomechanics offers a unique & logical approach to equine problems

- appreciation of the forces and systems which support posture and create movement.
- the interaction of the bones, muscles, ligaments and fascia planes ..... the links that make up the kinetic chains
- how the chains become disrupted or weakened to cause the signs & symptoms of dysfunction.

About us: We’ve been running this course since 2006, and take a pride in offering a no-nonsense route for the busy professional to become confident and proficient in this fascinating field.

Equine manual therapy is totally natural, highly effective and extremely satisfying to practice. All the techniques presented can be adapted to work on dogs and other quadrupeds. Myofascial work is taught using the FascialEdge® tool. This was developed and refined to make deep myofascial work easier and quicker for the practitioner, whether treating human or equine patients.

“Excellent presentation and content.....lively and enjoyable ..... practical & effective from the start, highly recommended”  Steve Brookes MRCVS (Vet)

“A very thorough and rounded course...has also made a major impact on my approach to difficult soft tissue problems in my human patients”  Storm Singleton D.C.

“Simply a brilliant course”  Lizzie Perchez D.C.
